

Progressive Cavity Pump, D-series

TECHNICAL DATA SHEET

The Flowrox progressive cavity (PC) pumps' D-series is designed for the most demanding industrial dosing applications. Due to its technical features and design high efficiency and high pressure are achieved with a short construction. It is easy to install and requires less energy and maintenance resulting in very low Total Cost of Ownership (TCO).

GENERAL

The Flowrox D-series progressing cavity pumps were conceived by utilizing Flowrox's extensive experience in progressing cavity pump service and spare parts production as well as the knowledge gained from our innovative peristaltic pump range. Flowrox is the industry benchmark for abrasive, corrosive and other demanding shut-off, control and pumping applications.

BENEFITS

The precise $\frac{1}{2}$ -lobe rotor and stator technology allows a rigid and tighter pumping unit, which enables 12 bar pressure per stage and excellent efficiency. With optimized compression of rotor and stator friction, spillover and wearing is minimized.

Easy installation, usage and maintenance have been taken into account in pump's structure, e.g. the direction of pump's suction connection can be adjusted stepless and change of main seal is quick and easy.

With Flowrox PC pump's built-in advantages the customer's actual savings both in energy consumption as well as installation and maintenance costs result in the total cost of ownership decreasing and higher plant availability.

$\frac{1}{2}$ -lobe round rotor enables accurate dosing

Benefits and Features

- Low life cycle costs (TCO) [EUR/m³]
- High efficiency
- High pressure (12 bar)
- Easy and quick installation
 - Over 180° stepless adjustment of the suction flange direction
- User-friendly and easy maintenance
 - Long service interval
 - Quick replacement of the mechanical shaft seal

Applications

- All demanding and accurate dosing applications in various industries
